

Pyramid Consulting Position Opening

Title: Consultant – Construction Process Improvement

Industry:

Utility (various improvements related to power generation, transmission, and distribution).

Job Description Summary:

This consultant works to improve processes, documentation, and quality of construction practices within a construction management environment.

Responsibilities:

- Share and educate construction team members on the principles of last planner system, look ahead schedules, weekly work plan, percent plan complete, increased site visualization, daily huddles, 5S, among other construction methods.
- Document current state problems and understand root causes of construction inefficiencies and errors.
- Structure work plan to accomplish construction process improvement objective.
- Facilitate discussions towards implementing construction process improvements, collect feedback, pilot solutions, and develop recommendations.
- Assist with documenting future state processes, developing associated checklists and work instructions, system requirements, and supporting roll-out.
- Provide feedback on cross function relationship between construction and supporting functions, including procurement, project management, finance, etc.
- Manage stakeholder communication, including construction management leadership.

Required Qualifications:

- Masters degree in Construction Technology Management, Construction Management, or Construction Engineering.
- Work experience in the construction field.
- Familiar with construction best practices, lean construction, and other construction process improvement tools.

Travel Requirements:

- Expect travel to be 50 to 75% of the time.
